

Dipesh Patel

Junior Software Developer | Aspiring Robotics Software Engineer

Ahmedabad, Gujarat | +91 8319821606 | dipesh.patel1902@gmail.com

LinkedIn: [linkedin.com/in/dipesh-patel-10aa4b2a6](https://www.linkedin.com/in/dipesh-patel-10aa4b2a6) | GitHub: github.com/starkdipesh

PROFESSIONAL SUMMARY

Detail-oriented Junior Software Developer with a strong foundation in Python and backend architectures (Laravel/PHP). Experienced in building database-driven web systems and automating processes. Eager to transition software development logic into the robotics and automation industry. Actively upskilling in ROS2 and Unity for robotic simulations and control systems, bringing a fresh perspective on full-stack robotics and IoT integration.

TECHNICAL SKILLS

- Programming Languages: Python, PHP, JavaScript, C++, C
- Robotics & Simulation (Learning): ROS2, Unity 3D
- Backend & Web: Laravel, Rest apis, MVC Architecture
- Frontend Technologies: Blade, Bootstrap, jQuery, HTML5, CSS3
- Database & Tools: MySQL, Git, GitHub, VS Code, Jupyter Notebook

PROFESSIONAL EXPERIENCE

Junior Backend Developer (PHP / Laravel) Shree Mahakali Software Pvt. Ltd. | Ahmedabad | Jun 2025 – Present

- Designed and optimized MySQL databases for ERP modules, ensuring efficient data pipelines and system reliability.
- Developed RESTful APIs and dynamic admin-managed modules to support enterprise-level workflows.
- Integrated backend logic with frontend frameworks (Blade, Bootstrap, JavaScript) to build responsive, data-driven user interfaces.
- Troubleshoot and maintain production-level applications, performing bug fixes and system enhancements.
- Automated internal data handling processes, improving system efficiency and data accuracy.

PROJECTS

AI-Integrated Virtual Assistant (Python): [starkdipesh/JIA-VIRTUAL-ASSISTANT](https://github.com/starkdipesh/JIA-VIRTUAL-ASSISTANT)

- **Problem:** Standard voice assistants (like Alexa or Google Assistant) strictly rely on voice commands, making them inaccessible or impractical in quiet office settings, noisy environments, or hands-free restricted setups.
- **Solution:** Developed a hybrid Python-based automation assistant supporting dual-mode interaction (silent text input alongside voice commands) with event-driven local system controls.
- **Impact:** Improved accessibility and usability across diverse environments while enabling hands-free background system task automation.

E-Procurement System (Live) URL: [eprocurement_live_link](#)

- **Problem:** Traditional paper-based procurement workflows were error-prone, lacked standardized cost calculations, and suffered from bottlenecks in manual multi-level approval hierarchies.
- **Solution:** Engineered an automated e-procurement platform featuring dynamic approval routing, automated cost calculation algorithms, and programmatic Purchase Order (PO) PDF generation.
- **Impact:** Eliminated manual calculation errors, enforced complete auditability, and streamlined vendor-to-purchase workflows into a structured, step-by-step digital process.

EDUCATION : Bachelor of Computer Applications (BCA) Sardar Patel University | 2022 – 2025 | (8.44 CGPA)

LANGUAGES: English, Hindi, Gujarati
